

POWER BAR™ MAGNETIC SWEEPERS

TOP-OF-THE-LINE FOD PROTECTION AGAINST FERROUS METAL DEBRIS!

For high-quality Foreign Object Debris (FOD) sweepers, look no further than the USA-made POWER BAR™! Rid your site of nails, screws, nuts, bolts, dropped tools, metal scraps and general iron-based debris. Our powerful, black anodized permanent magnetic bar assembly will keep your facility safe, clean and compliant.

UNSURPASSED QUALITY

The POWER BAR™ uses the strongest ferrite/ceramic magnets commercially available, with a 3.5 Million Energy Product. They are mounted to a thick steel plate — which helps route the magnetic field to the bottom of the bar — then encased in aluminum alloy tubing. Our magnets maintain their powerful attraction in all weather conditions. Plus, all POWER BAR™ products carry our Lifetime Magnetic Field Strength Warranty!

EASY TO INSTALL UNDER ANY MOTOR VEHICLE

Anyone who can drive can operate a POWER BAR™. As the vehicle moves, the powerful magnets pick up ferrous metal debris in its path, enabling the operator to sweep while performing routine duties, such as security or inspection patrols.

- Attach it to the underside of any vehicle with a chain-and-carabiner set (sold separately).
- Optimal ground clearance is a safe 3 to 5 inches (7.6 to 12.7 cm).
- Sweep while driving around the operations area, performing other duties.
- After parking, brush the FOD off the POWERBAR with a piece of wood.
- (For a portable disposal container, try our handy line of FOD CANS!)
- When not needed, simply detach from the vehicle and place in storage.
